

E-COMMERCE SALES ANALYTICS

Sales Dashboard in Excel

An interactive dashboard analyzing sales, profit, and shipment trends across product categories and regions

Project Overview

Why this dashboard was built

As a data analyst for an e-commerce company with a global customer network, the goal was to turn a large, multi-year sales dataset into an interactive Excel dashboard — giving stakeholders a fast, category-by-category view of sales performance.

Data source	Sales Data sheet — 51,290 orders × 20 fields
Tool	Microsoft Excel + Data Analysis Add-in
Categories	Auto & Accessories, Fashion, Home & Furniture, Electronic
Output	One interactive, combo-box-driven dashboard

SITUATION

“Management has provided sales data for the past years and is looking for actionable insights to improve business performance.”

TASK

Build a dashboard so stakeholders can select a product category and instantly see the month-wise and region-wise sales trend for it.

How the Dashboard Was Built

From raw orders to one interactive canvas

01

Data Preparation

51,290 orders loaded into the Sales Data sheet; the Aging field (ship lag in days) feeds a histogram via the Data Analysis Add-in.

02

Summary Tables

The Working Sheet aggregates Sales & Profit month-wise, and Sales region-wise — both recalculating from the raw orders.

03

Combo Box Control

A Form Control combo box lets users pick a Product Category; its linked cell drives every table and chart on the sheet.

04

Charts & Assembly

Month-wise and region-wise column charts, plus the aging histogram and KPI callouts, are combined into one dashboard canvas.

The Dashboard

Captured directly from Excel — Product Category = Auto & Accessories

Underlying Data Tables

Working Sheet — filtered to Auto & Accessories via the combo box

SALES & PROFIT — MONTH-WISE		
Month	Sales	Profit
Jan	87,526	38,447.32
Feb	85,683	38,753.10
Mar	95,249	41,165.32
Apr	95,962	42,365.80
May	91,445	40,871.83
Jun	96,597	42,010.25

(Jul – Dec follow the same pattern — full 12 months on the sheet)

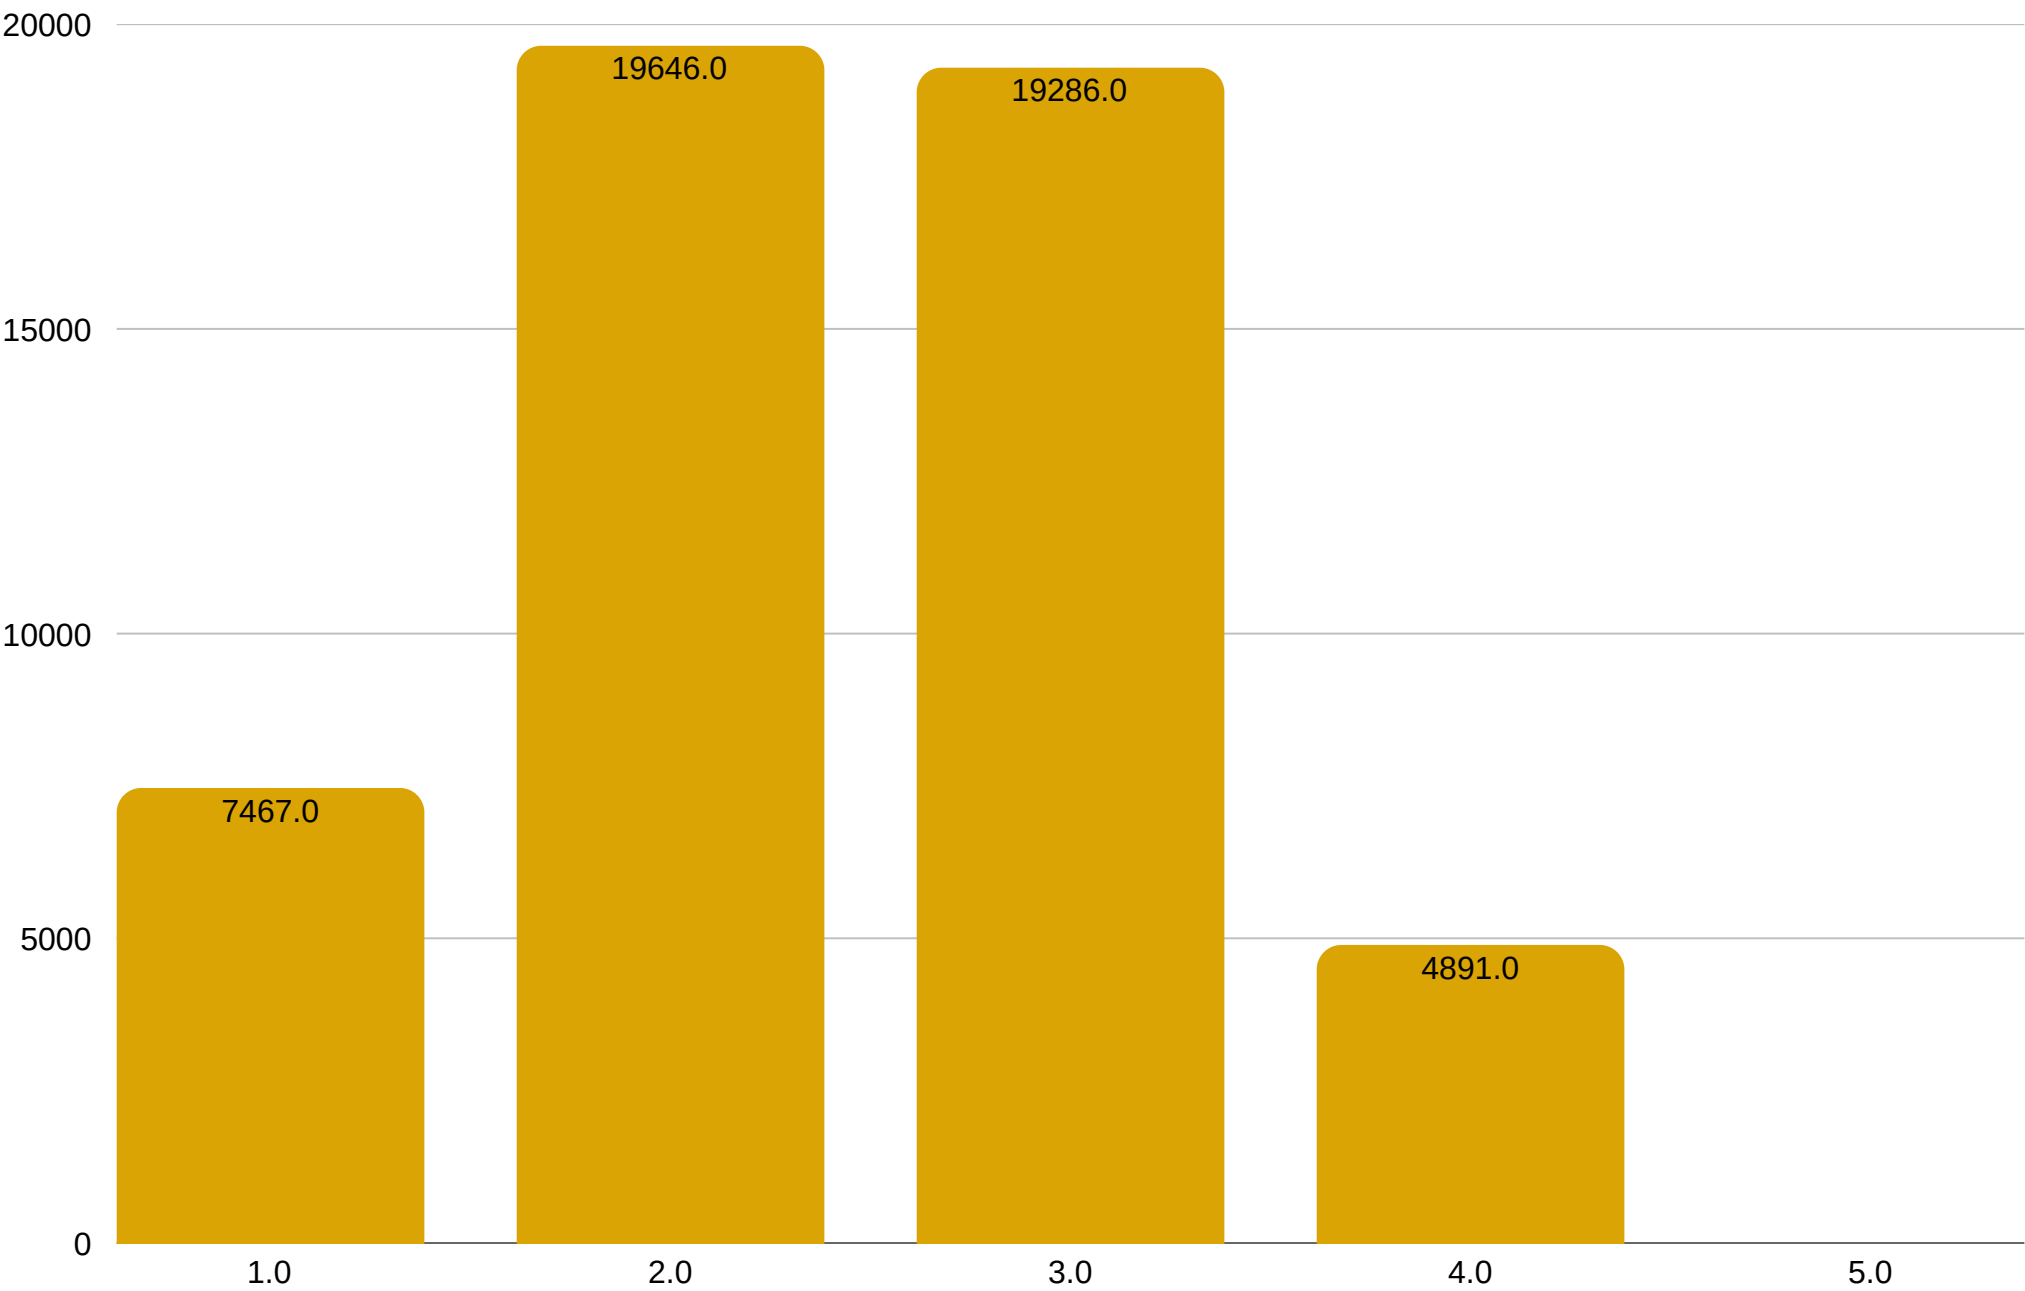

SALES — REGION-WISE (TOP 6)	
Region	Sales
Central	227,929
South	139,614
EMEA	102,947
Africa	102,156
North	100,025
West	75,109

(13 regions total on the sheet — Central leads, Canada is smallest at 10,382)

TOTAL SALES	TOTAL PROFIT	TOTAL QUANTITY
1,097,139	484,277.63	22,395

Shipment Aging Analysis

Histogram of the Aging field — built with the Data Analysis Add-in, across all 51,290 orders

READING THE BINS

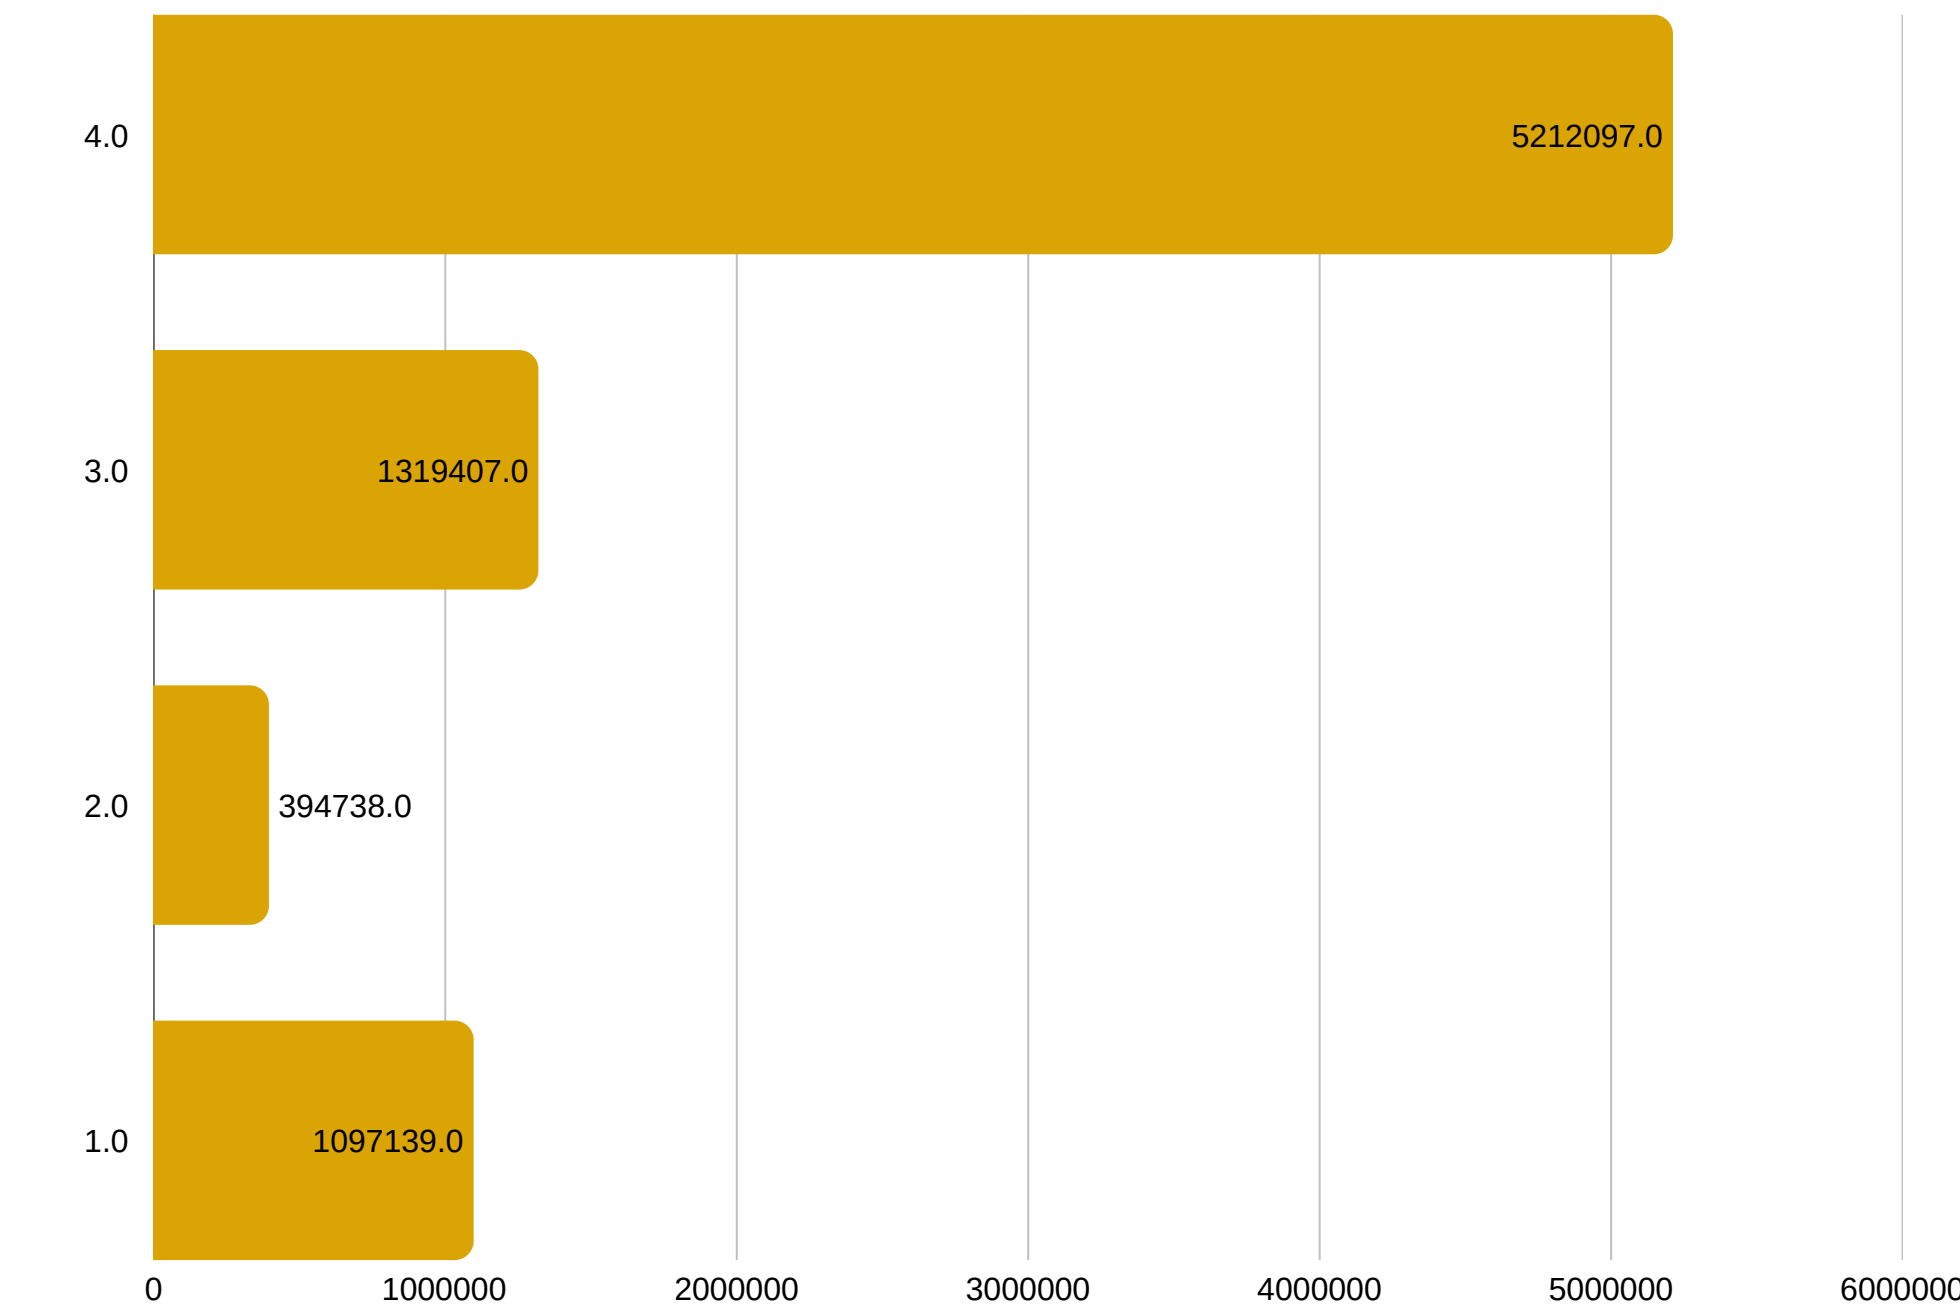

Aging measures days between Order Date and Ship Date. The Add-in bins every order into one of four ranges:

0 – 1 day	7,467 orders
2 – 5 days	19,646 orders
6 – 9 days	19,286 orders
10+ days	4,891 orders

Most orders ship within 9 days; almost none take longer than 10.

Category Benchmark

Total sales by product category — across all 51,290 orders

Category	Sales	Profit	Qty
Fashion	\$5.21M	\$2.48M	92,071
Home & Furn.	\$1.32M	\$0.59M	31,055
Auto & Access.	\$1.10M	\$0.48M	22,395
Electronic	\$0.39M	\$0.17M	8,211

Fashion drives 65% of all revenue; Auto & Accessories — the category shown on the dashboard — is the #3 category.

Key Insights

What the dashboard reveals for Auto & Accessories

1

Central is the anchor market

Region-wise sales peak in Central at \$227,929 — more than double the next closest region, South (\$139,614).

2

Sales are seasonally steady

Month-wise sales stay in an \$85K–\$97K band all year, with Apr, Jun and Oct as the strongest months.

3

Shipping is mostly fast

72% of all orders (across every category) ship within 9 days; very few take 10+ days.

4

Category context matters

Auto & Accessories is a solid #3 category by revenue, but Fashion outsells it nearly 5-to-1 company-wide.

Recommendations

Turning the dashboard's findings into action

1

Double down on Central and South for Auto & Accessories — together they're over a third of the category's revenue.

2

Investigate why Canada and the Caribbean lag so far behind (under \$33K each) — localized promotions or stock issues may be at play.

3

Use the combo box to repeat this view for Fashion and Home & Furniture, since both outsell Auto & Accessories today.

4

Keep monitoring the aging histogram — flag any month where the 10+ day bin grows, since it currently sits near zero.
